

Environmentally Friendly Features

Household Essentials™ offers a Cover & Pad that is Environmentally Friendly in its construction. Our line of NANOMAX® Covers & Pads have been certified for its material contents, recyclability and manufacturing characteristics by Cradle to CradleSM

UV Protected

Effectively blocking UV radiation helps maintain strong and vibrant colors

Durability & Strength

NANO technologies ability to keep a dry and clean surface allows for unsurpassed performance in durability. NANO technology manipulates individual atoms and molecules to weave a small, but strong material.

NANO Coating

Most Stain and Scorch coatings sit on top of the cover fabric. Nano coating is integrated, absorbed into the cover fabric, improved stability & performance, overall more effective.

Liquid Repellent—Stain, Oil and Water Repellent

The water repellent property of fabric by creating nano-whiskers, which are 1/1000 of the size of a typical cotton fibre, that is added to the fabric to create a peach fuzz effect without lowering the strength of cotton.

Lotus Effect...

Just like with Lotus plants in nature, water beads up, water rolls off, droplets take dirt particles off surface. This superior liquid repellency helps keep surfaces clean.

Cleaner Surface

With water droplets taking dirt particles off surface, NANO technology allows for a cleaner surface.

Environmentally Friendly

Our NANO coating is 85% water based and uses 50% less chemicals. By eliminating chemicals, NANO technology makes the product safer, stronger and better.
